

**MINING HEAVY DUTY VEHICLES SAFETY SEAT BELT
WITH HUMAN VOICE.**

The Seat Belt Reminder is a kind of sensor, which detects occupants in DRIVER seats.

A seat belt reminder system in the vehicle triggers a warning light and/or an audible HUMAN VOICE, reminding unbuckled seat occupants to fasten their seat belts.

Why Seat Belt Reminders Saves Lives

Seat belts are part of a passive safety system and are mainly intended to reduce injuries by preventing truck occupants from hitting hard interior elements of the vehicle, hitting other passengers or being ejected from the vehicle. In the event of a crash, safety belts reduce the risk of fatal injury to front reduce the risk of fatal injury to front seat occupants by 60% in light trucks.

Considering 80% of unbuckled occupants put on their seat belt thanks to an SEAT BELT REMINDER, it is one of the most effective ways of preventing death or injury in a car crash.
